Chairs Welcome

Welcome to the Smart Digital Futures 2022 (SDF-22) multi-theme conference, held in hybrid format on the island of Rhodes in Greece and also using the KES-Online virtual conference platform, during 20-22 June 2022.

The consequences of the Covid-19 pandemic are still being felt for the third year in succession, the effects of the conflict in Ukraine are being felt by many people including some of our members, and there are other continuing problems in the world. We offer condolences and sympathy to those who have sadly lost loved ones or colleagues or been affected in other ways, and we look forward to better times.

SDF-22 is an amalgamation of six KES conferences: Agent and Multi-Agent Systems - Technology and Applications (KES-AMSTA-22), Intelligent Decision Technologies (KES-IDT-22), Human Centred Intelligent Systems (KES-HCIS-22), Innovation in Medicine and Healthcare (KES-InMed-22), Smart Education and e-Learning (KES-SEEL-22) and Smart Transportation Systems (KES-STS-22). Although the conferences share a common forum, each one has its own Chair and International Programme Committee.

SDF-22 was organised to take place using an innovative hybrid format. Delegates could opt to attend the conference in person on the island of Rhodes, or if it was not possible for them to travel, they could choose to take part virtually using the KES-Online cloud-based conference platform. In either case delegates could submit a paper and present it, at the venue, or online. The best papers submitted to the conference were presented and published in several volumes of proceedings in the Smart Innovation Systems and Technology series by Springer-Verlag.

Delegates registered for SDF-22 may attend any of the live sessions at the venue, or view sessions from any of the conferences online and mix with the communities of the others through the online lounge.

Smart Digital Futures was organised as part of the KES International conference portfolio. For over a decade the mission of KES International has been to provide a professional community, networking and publication opportunities for all those who work in knowledge-intensive subjects. At KES we are passionate about the dissemination, transfer, sharing and brokerage of knowledge. The KES community consists of several thousand experts, scientists, academics, engineers, students and practitioners who participate in KES activities. KES runs conferences in different countries of the world on leading edge topics including Intelligent Systems, Sustainability in Energy and Buildings, Innovation, Knowledge Transfer and Enterprise, and Digital Media. KES provides routes to publication, such as journals, book series, and

online publications, both through its own media and in conjunction with major publishers. KES also provides knowledge transfer services and consultancy.

The aim of Smart Digital Futures was to bring together researchers working at the leading edge of developments in smart systems and intelligent technology theory and applications. This programme contains 190 papers, each selected after full peer review by members of the International Programme Committees of the conferences.

We thank the keynote speakers for providing informative accounts of the latest research in their areas:

Associate Professor Dr. Smaranda Belciug, University of Craiova, Romania (title of talk 'Artificial Intelligence in Cancer');

Associate Professor Bill Kapralos, Ontario Tech University, Canada, (title of talk 'Immersive Technologies and intelligent avatars for medical education');

Professor Chee Peng Lim, Deakin University, Australia (title of talk 'Research and Innovation in Smart Technologies: Principles and Paradigms');

Professor Yoshimasa Masuda, Carnegie Mellon University, USA (title of talk 'Digital Strategy and Enterprise Architecture for Society 5.0 and Industry 4.0');

Professor Stefania Montani, University of Piemonte Orientale, Italy (title of talk 'Mining and understanding medical processes: can we open the "black box"?');

We thank the General Chairs and Programme Chairs of the SDF-22 conferences for their hard work and dedication. We appreciate the efforts of those organising and chairing special sessions, members of the International Programme Committees and reviewers and we thank them. We are grateful to authors for the papers they have contributed to the conference, and to delegates for their attendance and we give them our thanks.

Finally, we thank the KES International administration team for their efforts.

Whether you attend the conference at the venue on Rhodes or online we thank you for your participation. We hope you find the conference useful and informative, we wish you all well, and we look forward to seeing you at another of our events in the future.

Artificial Intelligence in Cancer

Abstract: The aim of this lecture is to establish a psychological connection with the audience, for each person to truly understand the vast implication of cancer in a person's life, whether her/his own health is involved, or a loved one's. Dealing with cancer implies physical, psychological, and financial issues. At first, we shall take a walk down history lane and see how cancer was seen in the past, followed by a recap from nowadays. Artificial Intelligence algorithms and a statistical analysis handbook, which needs to be performed anytime we are dealing with diagnosis, new clinical trials, new drugs, new oncological surgeries are presented also. Last, but not least, we shall paint a glimpse of the future, in which a trusted friend, Artificial Intelligence, steps in to lend us a helping hand.

Biography: Smaranda Belciug is an Associate Professor at the Department of Computer Science, Faculty of Sciences, University of Craiova and Data Scientist at the Molecular Tumor Board - Multidisciplinary Commission for Personalized Therapeutic Indication based on a Comprehensive Molecular (Genetic) Assessment. She is a member of the Editorial Board at Springer Nature-BMC Medical Informatics and Decision Making, at the Journal of Medical Artificial Intelligence, and at the International Journals of Computers in Healthcare.

Her main research interests include Artificial Intelligence applied in the Healthcare system and Statistics. She is the authors of the two monographs "Artificial Intelligence in Cancer: diagnostic to tailored treatment", Elsevier, 2020, and "Intelligent Decision Support Systems - A journey to Smarter Healthcare", Springer 2020.

She is an enthusiastic partisan of the multidisciplinary approach in scientific studies, and all her research is driven by this reason. This has been recognized at multiple levels, from the wide variety of nature of the journals she has published into to the variety of journals and conferences that she reviews for.

Immersive Technologies and intelligent avatars for medical education

Abstract: The technologies of virtual reality (VR), augmented reality (AR), serious games, virtual worlds and social networks have become collectively known as immersive technologies and are able to engage users of all ages. Central to many interactive digital experiences are virtual characters known as avatars, that is, digital representations of the self that enable individuals to interact within a virtual environment. By adopting personalized and intelligent avatars, users are able to interact with each other in virtual worlds and foster cohesive social relations that can lead to changes in emotions and cognitive function. The continuous increase in computational processing power and accompanying decrease in the size of electronic components has led to the decreasing cost and rising availability of consumer-level immersive technologies that have helped advance the adoption of immersive technologies in recent years. Advances in areas such as graphics, artificial intelligence (AI), sensors and speech synthesis have led to increases in the levels of fidelity and have enabled increasingly more natural interactions with avatars. Within the healthcare field, immersive technologies and VR/AR in particular, are not so much technologies of the future but rather, of the present where researchers, medical professionals and educators are finding innovative ways to leverage immersive technologies and transform both healthcare teaching and practice; this has only accelerated given the move to remote learning to facilitate COVID-19 shutdowns. In this presentation a brief overview of the application of immersive technologies (AR, VR, and serious games) and intelligent avatars (with a particular focus on the detection and expression of emotions), in medical education will be provided. Emphasis will be placed on the benefits and limitations of existing technologies, what currently can and cannot be, and various open problems that must be addressed before the application of immersive technologies becomes more widespread in medical education.

Biography: Bill Kapralos is an Associate Professor within the maxSIMhealth Laboratory at Ontario Tech University and an Honourable Guest Professor at Shizuoka University (Hamamatsu, Japan). He is also the Technical Lead of the Collaborative Human Immersive Interaction Laboratory (CHISIL), Sunnybrook Health Sciences Centre in Toronto. His current research interests include: immersive technologies, serious gaming, multi-modal virtual environments/simulation/reality, the perception of auditory events, and 3D (spatial) sound generation. With funding from various government and industry sources, he has led several large interdisciplinary and international virtual simulation/serious gaming research projects. He was recently awarded an Ontario Tech University Research

Excellence Chair and a Greek Diaspora Fellowship (sponsored by the Stavros Niarchos Foundation). He is a past recipient of an Australian Government 2018 Endeavour Executive Fellowship to conduct research in Australia, a past recipient of a Natural Sciences and Engineering Research Council of Canada (NSERC) and Japan Society for the Promotion of Science (JSPS) Fellowship, a past recipient of an IBM CAS Faculty Award, and a past co-recipient of a Google Faculty Award.

Research and Innovation in Smart Technologies: Principles and Paradigms

Abstract: Advances in digital and smart technologies have transformed many aspects of our daily activities. Over the years, researchers and practitioners have successfully created and implemented a variety of smart technologies to solve dynamic and complex tasks in different domains. In this talk, several computational intelligence (CI) principles and paradigms for designing and developing smart systems, e.g., neural computing, fuzzy computing, and evolutionary computing, will be explained. Application of the resulting CI-powered smart systems to undertaking data-based learning and decision support tasks will be demonstrated, which include real-world healthcare and industrial problems. Implications of smart technologies for advancing our digital futures in the era of Industry 4.0 and beyond will be discussed.

Biography: Chee Peng Lim received his Ph.D. degree from the University of Sheffield, UK, in 1997. His research focuses on the design and development of computational intelligence-based systems for pattern classification, data analytics, decision support, and optimisation, with application to medical prognosis and diagnosis, fault detection and classification, as well as manufacturing process optimisation. He has published over 500 technical papers in journals, conference proceedings, and books, and received 8 best paper awards in international conferences.

His research has received the support of several prestigious fellowships for fostering international collaboration, which include the Australia-India Senior Visiting Fellowship (by Australian Academy of Science), Australia-Japan Emerging Research Leaders Exchange Program (by Australian Academy of Technological Sciences and Engineering), Commonwealth Fellowship (at University of Cambridge, UK), Fulbright Fellowship (at University of California, Berkeley, USA), and Visiting Scientists Program of the Office of Naval Research Global (at Harvard University and Stanford University, USA). Together with research partners, a number of award-winning smart software systems have been developed for real-world applications, viz., Innovation and New Product Exposition Show (Gold Medal), USA; British Innovation Show (Gold and Special Award: Double Gold of the International Invention of the Year), UK, and the Geneva International Exhibition of Inventions (Gold Medal), Switzerland.

Digital Strategy and Enterprise Architecture for Society 5.0 and Industry 4.0

Abstract: Information societies and Enterprises face crucial challenges currently and Society 5.0 can contribute to a supersmart society, while Industry 4.0 becomes important in the manufacturing industry. The development of new business models is promoted with digital platforms and architectures for Society 5.0 and Industry 4.0. Therefore, the adaptive integrated digital architecture framework (AIDAF) for Society 5.0 and Industry 4.0 is expected to promote, design, and implement the digital platforms in many industries from now on. In this talk, first, I introduce that various energy management systems and related smart energy digital platforms are designed in an alignment to digital IT strategy for sharing economy toward Society 5.0, with the AIDAF framework for Design Thinking Approach with Risk Management, that will lead to the Tokyo Smart Energy Architecture Vision. Besides, I brief how to apply the AIDAF for enabling Industry 4.0 in healthcare industry, covering the related digital platforms and robotics. Last, I introduce the AIDAF with Human computer interaction (HCI) - artificial intelligence (AI) digital healthcare platforms architected to improve the healthcare status of patients with lifestyle-related diseases such as diabetes, and osteoporosis, as the latest trend.

Biography: Yoshimasa Masuda is Teaching Faculty, Instructor at Carnegie Mellon University - ISR (Institute for Software Research) and Professor at School of Management in Tokyo University of Science and Graduate school of Keio University (specially appointed), with Sr. role in NTT Data Institute of Management Consulting. He has more than 14 years' experience in enterprise in many industries. He earned a Ph.D. degree in Keio University. He had experienced many global projects, international assignments in IBM. He started up the global enterprise architecture in Global Pharmaceutical company and worked as Sr. IT Director in Global Robotics company in 2019, and started the "Global Digital Strategy Consulting"

in NTT Data group, Institute of Management Consulting as Senior Management. He completed the Executive Education (MoT) in MIT in 2011, and he has joined Carnegie Mellon University since 2018. He was selected as "Distinguished Member" of AIS (Association for Information Systems) in 2021. His research interests are enterprise architecture in Digital era, digital healthcare, IT management. Yoshimasa Masuda is author of the successful AIDAF - Adaptive Integrated Digital Architecture Framework

and the book Enterprise Architecture for Global Companies in a Digital IT Era, from Springer Nature. He got the "Global Achievement Award - Innovative Solutions Award 2021" from worldwide ISACA, by establishing the AIDAF framework.

Mining and understanding medical processes: can we open the "black box"?

Abstract: Healthcare organizations log enormous quantities of data in their information systems, about the diagnostic or therapeutic activities that are executed to manage or prevent diseases. In particular, the sequence of activities executed to care a single patient is called a trace. The analysis of patient traces by means of machine learning techniques allows medical experts and administrators to better understand the actual processes implemented at the organization, identifying flaws and optimizing the quality of the service they offer.

In this presentation, we will focus on process mining from patient traces, and on deep learning trace classification: both areas rely on strong machine learning techniques, which, however, suffer from a major drawback, i.e., their "black box" nature. We will discuss this issue, and propose possible approaches that can provide more transparency to the algorithmic output.

STS22-003	Investigating the Influence of ADAS on Drivers? Evasive Behaviors During Car-following on Highways Jianqiang Gao, Bo Yu, Shengzhao Wang
STS22-004	Effect factors analysis of driver's freeway route deviation based on questionnaire survey data Weiwei Qi, Nanjie Zhou, Huapeng Wang, Wenyi Wang
STS22-006	Characteristics Extraction and Increasing Block Fine Modeling for Repeated Speeding Behaviors Yuan Yao, Chuanyun Fu, Guifu Li, Yajie Li
STS22-012	Investigating contributing factors of hard-braking events on urban road network Yue Zhou, Haiyue Liu, Chuanyun Fu
STS22-018	Spatiotemporal distribution of traffic violations in a medium-sized city Luzhou Haiyue Liu, Yue Zhou, Chuanyun Fu, Yining Tan

STS-03: Tuesday 21st June 2022

Time: 10:30 - 12:30 EEST

Room 5

STS-03: Low emission transport

Chair: Kun Gao

PROSE Paper No	Paper Title / Authors
STS22-008	Impact Analysis of Wired Charging and Wireless Charging on Electric Bus Operation: A Simulation-based Method Wei Qin, Libing Liu, Jinhua Ji, Mingjie Hao, Yiming Bie
STS22-010	Dynamic electric bus control method for the route with dedicated bus lane Yuting Ji, Jinhua Ji, Yiming Bie
STS22-011	Evaluating the impact of signal control on emissions at intersections Jieyu Fan, Martin Baumann, Sarang Jokhio, Jie Zhu
STS22-014	Usage pattern analysis of e-scooter sharing system: A case study in Gothenburg, Sweden Gentrina Peci, Sadia Ali, Jieyu Fan, Jie Zhu
STS22-016	Traffic flow model of the weaving section in signalized roundabouts Tianshu Zhan, Xianmin Song, Yunxiang Zhang, Kunwei Wang
STS22-007	An Effective berths-based Approach to Calculate the Capacity of Drop-off Exclusive Roadway Yaping Zhang, Guifu Li, Chuanyun Fu, Qian Luo

KES International

Knowledge Brokerage | Professional networks | Conferences | Publications | Membership Services

KES INTERNATIONAL

For over a decade the mission of KES International has been to provide a professional community, networking and publication opportunities for all those who work in knowledge-intensive subjects. At KES we are passionate about the dissemination, transfer, sharing & brokerage of knowledge. The KES community consists of several thousand experts, scientists, academics, engineers, students and practitioners who participate in KES activities.

KES brings people together to make ... Knowledge Connections.

KES CONFERENCES

For over 20 years KES has run conferences in different countries of the world on leading edge topics -

Intelligent Systems -- *Intelligent Decision Technologies -- Intelligent Interactive Multimedia Systems and Services -- Agent and Multi Agent Systems -- Smart Technology based Education and Training*

Sustainable Technology -- *Sustainability in Energy and Buildings, Smart Energy -- Sustainable Design and Manufacturing.*

Innovation, Knowledge Transfer, Enterprise and Entrepreneurship -- *Innovation and Knowledge Transfer -- Innovation in Medicine and Healthcare*

Digital Media -- *Archiving Tomorrow -- Innovation in Music*

Some of the countries - Australia, Chile, Croatia, England, Germany, Japan, Ireland, Italy, Poland, Portugal, New Zealand, United States, Vietnam, Wales

KES JOURNALS

KES edits a range of journals and serials on knowledge intensive subjects -

-- *International Journal of Knowledge Based and Intelligent Engineering Systems -- Intelligent Decision Technologies: an International Journal -- InImpact: the Journal of Innovation Impact -- Sustainability in Energy and Buildings: Research Advances -- Advances in Smart Systems Research*

KES TRANSACTIONS -- THE KES OPEN ACCESS LIBRARY

KES Transactions is a book series containing the results of applied and theoretical research on a range of leading-edge topics. The series accepts conference proceedings, edited books and research monographs. Papers contained in KES Transactions may also appear in the KES Open Access Library (KOALA), our own online gold standard open access publishing platform.

TRAINING AND SHORT COURSES

KES can provide live and online training courses on all the topics in its portfolio. KES has good relationships with leading universities and academics around the world, and can harness these to provide excellent personal development and training courses.

DISSEMINATION OF RESEARCH RESULTS

It is essential for research groups to communicate the outcomes of their research to those that can make use of them. But academics do not want to run their own conferences. KES has specialist knowledge of how to run a conference to disseminate research results. Or a research project workshop can be run alongside a conference to increase dissemination to an even wider audience.

THE KES-IKT KNOWLEDGE ALLIANCE

KES works in partnership with the Institute of Knowledge Transfer (IKT), the sole accredited body dedicated to supporting and promoting the *knowledge professional*: those individuals involved in innovation, enterprise, and the transfer, sharing and exchange of knowledge. The IKT accredits the quality of innovation and knowledge transfer processes, practices activities, and training providers, and the professional status of its members.

ABOUT KES

Formed in 2001, KES is an independent worldwide association involving about 5000 professionals, engineers, academics, students and managers, operated on a not-for-profit basis, from a base in the UK. A number of universities around the world contribute to its organisation, operation and academic activities. KES International Operations Ltd is a company limited by guarantee that services the KES International organization.
